

Plain TeX Demonstration

This is a simple document typeset using standard **Plain TeX**, rather than LaTeX. In Plain TeX, paragraph breaks are created by leaving a blank line in the source file, just

1. Mathematical Formulas

You can write inline math like $E = mc^2$, or displayed math equations using double dollar signs:

$$\sum_{n=1}^{\infty} \frac{1}{n^2} = \frac{\pi^2}{6}$$

Notice that instead of LaTeX's `\frac{1}{n^2}`, Plain TeX uses the native `\over` primitive

2. Bulleted Lists

Plain TeX uses the `\item` macro for lists. It does not require wrapping them inside an environment:

- This is the first item in a native TeX list.
- This is the second item.
- Notice there is no closing tag needed for this list.

End of Document.
